

PDS END SEM PROJECT REPORT

TEAM MEMBERS:

(Section 4 Group 2)

1. Yada Akshay (23EE01065)
2. Surya Dipto Basu (23EE01056)
3. Tondepu Sohith (23EE01063)

The project made by our team is “Hotel Management”. It provides a user friendly and interactive platform for customers to access and provide the details to hotel server and have a stay.

MOTIVATION:

Hotel management is a dynamic and ever-evolving industry with a growing demand for excellence in customer service, efficiency, and it's sustainability. By working on this project, we will not only gain practical insights into the operations of the hospitality sector but also contribute to creating better guest experiences and more environmentally friendly practices.

We chose hotel management for the reason that we felt we could use the concepts we know to the fullest and improve our knowledge and understanding in them .c

Highlights:

- 1)The code has an inbuilt mini game in it which improves the feel of the interface.
- 2) Interactive sounds for different functions in the code.

3)File management which refers to the saving of data of the entries we make and which helps to view the data of each entry individually or together.

4)The user friendly atmosphere makes it easy to use and even anyone with minimal digital knowledge can easily access the thing they want to do.

5)Login privacy so that only the user can access the data which gives the security from data breach.

WHAT WE HAVE LEARNT:

We learnt many things and improved our current knowledge in familiar topics.We got to know about the precise usage of the if statement and structures.

We learnt about file management and the storage of data which helped us a lot with improvements in our project.We faced difficulties with the understanding of the functions for the storage of data and linking of the text file with code.But it was exciting to learn new things such as sound and adding colour to the text which we hadn't known earlier.We had to go through many other things like making the code effective and using functions effectively.

AREAS OF IMPROVEMENT:

We can improve this project in many ways.As our project is based on hotel management it provides us many fields of improvement.There can be graphics added to the interface which can improve the overall experience.There can be a clicking mechanism adding an authentic experience which is better than typing a number or any letter for the operation

we want to perform. There also can be a billing system that can be added to it according to the services provided/taken by the customer. The most important adjustment or improvement that we think can be made is linking databases to the code so that there can be multiple interfaces based on the user's requirement.

FUTURE SCOPE:

Implementing advanced technology and data analytics can enhance guest services, making stays more personalized and convenient.

Tasks like reservations, check-ins, and housekeeping through automation and software can reduce operational costs and increase efficiency.

Advanced security systems can protect guests' data and ensure their safety.

CONTRIBUTION OF EACH MEMBERS:

Akshay Yada:

Worked on File management and done half the main code i.e half of the menu options.

Surya Dipto Basu:

Worked on file management and done linking of code and text file along with introductory page(login page) and some menu options.

Tondepu Sohith:

Worked on the sound effects ,colouring of text and mini game included in the menu.

Combined contributions:

Worked on errors faced and improvements (design of page) to get the final code.
